

Custom Image for Managed DevOps Pool

Agenda

1. What is a Managed DevOps Pool?
2. Create an Ubuntu image with Docker
3. Create a Windows image with .NET 9
4. Use the custom images in Managed DevOps Pools
5. Run test pipelines

What is a Managed DevOps Pool?

Managed DevOps Pools

Use “VMs” to self-host Azure DevOps agents

Microsoft manages the VMs

Use powerful VMs for a short time

Microsoft agents

- Windows or Linux

Use your own images to host the agent

The best option to self-host Azure DevOps agents
