AKS Automatic

Agenda

1. AKS Automatic Intro

2. Create AKS Automatic

3. Compare with non-automatic cluster

AKS Automatic

One-click, production-ready AKS clusters

Uses Standard pricing tier

Limitations

AKS Automatic clusters require deployment in Azure regions that support at least three availability zones.

You can only create AKS Automatic clusters in regions where API Server VNet Integration is generally available (GA).

Limitations

You can't add non-node auto provisioning node pools to AKS Automatic clusters. There's no effect on existing Automatic clusters that have non-node auto provisioning pools.

AKS Automatic only supports the Azure Linux OS.

Demo
